

Table of Contents

Module 1: Introduction to Linux (2 hours)

1.1 What is Linux

- History and Philosophy of Linux
- Key Features of Linux

1.2 Advantages of Using Linux

- Comparing Linux to Other Operating Systems

Module 2: Installation (3 hours)

2.1 Preparing for Installation

- Hardware Requirements
- Pre-installation Checks

2.2 Installing Linux Distributions

- CentOS / Red Hat Installation
- Ubuntu Installation

2.3 Virtualization and VirtualBox

- Virtualization Concepts
- Installing and Configuring VirtualBox
- Creating Virtual Machines

Module 3: Basic Linux Commands (4 hours)

3.1 Introduction to the Linux Terminal

- Command-Line Interface (CLI) Basics
- Navigating the Filesystem

3.2 Linux System Commands

- Managing Processes
- User and Group Management
- System Information

3.3 System Utility Commands

- Working with Dates and Times
- Calculations with bc
- Essential Commands (cal, which, uname, hostname)

3.4 Service Management with systemctl

- Managing Services and Daemons

3.5 Process Management

- Process Backgrounding (bg)
- Process Foregrounding (fg)
- Nice Value and Process Priority

Module 4: File System (3 hours)

4.1 Exploring the Linux Filesystem

- Directory Structure
- Filesystem Hierarchy Standard (FHS)

4.2 Manipulating Files and Directories

- Creating, Deleting, and Renaming

- Copying and Moving
- Permissions and Ownership

4.3 File and Directory Commands

- Viewing File Contents (cat, less)
- Searching for Files (find, locate)
- File Permissions and Attributes (chmod, chown)

Module 5: Shell Scripting (3 hours)

5.1 Introduction to Shell Scripting

- Scripting Basics
- Shell Scripting vs. Programming Languages

5.2 Writing Your First Shell Script

- Script Execution
- Variables and Data Types

5.3 Conditional Statements and Loops

- if, else, elif statements
- for and while loops

5.4 Functions and Scripting Best Practices

- Writing Reusable Code
- Shell Scripting Best Practices

Module 6: Linux Networking (4 hours)

6.1 Networking Basics

- TCP/IP Fundamentals
- Network Interfaces and Configuration

6.2 SSH and Remote Access

- SSH Configuration
- Securely Connecting to Remote Servers

6.3 DNS and DHCP

- DNS Configuration
- DHCP Setup

6.4 Web Server Installation and Configuration

- Installing and Configuring Apache Web Server
- Hosting a Simple Website
- Web Server Security Best Practices

Module 7: Package Management (3 hours)

7.1 Package Management Concepts

- Package Managers Overview
- Repositories and Package Sources

7.2 Managing Software with yum (CentOS/Red Hat)

- Installing, Updating, and Removing Packages
- Repository Configuration

7.3 Managing Software with apt (Ubuntu/Debian)

- Package Management on Debian-based Systems
- Managing Software Repositories

Module 8: Advanced File Management (2 hours)

8.1 Advanced File Operations

- File Linking and Symbolic Links
- Archiving and Compression (tar, gzip, zip)

8.2 Filesystem Management with fstab

- Understanding fstab and Mount Points
- Managing Storage Devices

8.3 Disk Quotas

- Implementing Disk Quotas
- Monitoring and Managing Disk Usage

Module 9: Security and Permissions (3 hours)

9.1 User and Group Management

- Managing Users and Groups
- User Account Security

9.2 File Permissions

- Understanding File Permissions
- Special Permissions (SUID, SGID, Sticky Bit)

Module 11: AWS Cloud Fundamentals (3 hours)

11.1 Introduction to AWS

- Understanding AWS Services and Offerings
- AWS Global Infrastructure Overview

11.2 AWS Identity and Access Management (IAM)

- IAM Concepts and Users
- IAM Policies and Permissions

11.3 AWS EC2 (Elastic Compute Cloud)

- Launching and Managing EC2 Instances
- Security Groups and Key Pairs

11.4 AWS S3 (Simple Storage Service)

- Storing and Retrieving Data in S3
- S3 Security and Permissions

Module 14: Linux and AWS Integration (2 hours)

14.1 Running Linux on EC2

- - Launching Linux Instances
- - EC2 Instance Customization

Module 15: DevOps Use Cases for IaC (4 hours)

15.1 Introduction of devOps

- What is DevOps
- Advantages of DevOps methodology

15.2 Infrastructure as Code (IaC) with Terraform

- Infrastructure as Code concepts
- Creating and managing infrastructure with Terraform
- Provisioning resources on AWS using Terraform
